

2nd International Small Game Conference

The 2nd International Small Game Conference in 2026 offers the most comprehensive and practice-oriented program to date. Throughout the day, both Hungarian and international experts will present the most important and practically relevant topics in small game management—from habitat management and modern rearing technologies to feeding practices, health challenges, AI-based solutions, and even an insight into the world of UK driven shooting.

The primary goal of the conference is to provide directly applicable knowledge, international perspectives, and reliable hands-on experience for everyone involved in pheasant and partridge management.

The day concludes with a professional roundtable discussion, international speakers, and experienced wildlife managers sharing their insights.

The conference can be followed in both Hungarian and English. For detailed information about the speakers, please visit our website.

CONFERENCE DATE: **06 MARCH 2026, KECSKEMÉT**

REGISTRATION: **WWW.PERJESIVAD.HU/SZAKMAINAP**
